EVALUATION
CAPACITY
NETWORK

+ Webinar Outline

+ Main Sources

+ Everyday Examples

Getting out of bed in the morning:

- Evaluate whether to hit snooze
- Judgement about the weather
- A brief review of the previous day's events
- Noticing the irritating socks on the floor from two days ago
- An anticipatory assessment of today's tasks and tonight's dinner.
- Judging the best route to your morning meeting

+ Evaluative Thinking (ET)

A willingness to ask: “**How do we know what we think we know?** ... Evaluative thinking is not just limited to evaluation projects...it’s an analytical way of thinking that **infuses everything** that goes on.”

Patton; cited in Archibald and Buckley, from <http://aea365.org/blog/tom-archibald-and-jane-buckley-on-evaluative-thinking-the-je-ne-sais-quoi-of-evaluation-capacity-building-and-evaluation-practice/>

You're right, after thinking it through,
I'm not sure how the one leads to the other

ET is **critical thinking** applied in the context of evaluation, motivated by an attitude of **inquisitiveness** and a belief in the **value of evidence**, that involves:

- ✓ Identifying assumptions,
- ✓ Posing thoughtful questions,
- ✓ Pursuing deeper understanding through reflection and perspective taking,
- ✓ And making informed decisions in preparation for action.

+ Stepping outside the messiness

+ Evaluating Worth or Value

- Is it valuable?

- Worthwhile or not worth it?

- Good or bad, right or wrong?

- Going okay or off the rails?!

...attractive, difficult,
exciting, off-putting, useful,
undesirable, important,
functional, effective,
boring, expensive, too
much, too little, just right,
interesting, too simple,
much too complex or a
disaster...

+ Noticing Discrepancies

The need for evaluation arises in the discrepancy between what 'is' and what 'ought' (or 'ought not') to be.

- A split between what we expected or didn't expect
- What we wanted and didn't want
- What we planned and what actually occurred

"What! Nobody thought to bring a paddle?"

+ Cycle(s) of learning

+ Example Questions

Smaller scope:

- How did that activity go? Why?
- Did it go as I expected or intended? Why?
- Is there anything I could do differently next time so it would be better?
- What was the context? What else was going on wider afield that may relate to this?

Larger scope:

- What are the program's strengths and weaknesses?
- What works and what doesn't (and why)?
- Where are opportunities for improvement?
- Are participants getting what they need?

+ Always ask...

“... in relation to what?”

Purpose

Objectives

Outputs

Outcomes

Some Tools to Support Evaluative Thinking

+ Simple ways to capture 'data'

Formal	Informal
Document analysis	Review case notes, annual reports, strategic plans, theories of change
Focus groups	Reflective team meetings (monthly/annual), participant groups (e.g. arts-based learning)
Individual interviews	Staff review meetings, home visit
Surveys and assessment	Snapshot surveys, polling,
Participant Observation	Daily personal reflection, participant data (e.g. program entry)

+ Critical Thinking Guide

Who

- Benefits from this?
- Is this harmful to?
- Makes decisions about this?
- Is most directly affected?
- Is missing?

What

- Are the strengths/weaknesses?
- Is another perspective?
- Is another alternative?
- Would be a counter-argument?

+ Adaptive Cycle

- Knowing where you are at

+ Personal Reflection Journal

- ✧ How did that go?
- ✧ Did it go as I expected or intended? Why (not)?
- ✧ Is there anything I could do next time so it would be better?

+ Monthly Team Meetings

Reflective questions on an agenda:

What has changed since the last meeting?

What currently works well and why?

What do we want to do more of?

What is one thing that has challenged you in the last month?

What is not working well and why?

What could we change to make it better?

What should we do less of?

+ Annual reflection meetings

Looking Back:

- Where have we been?
- What have we achieved?

Looking Forward:

- Where do we want to go next?
- How do we want to get there?

+ Snapshot survey

A large, empty rounded rectangle with a black border, intended for handwritten notes.

That you
learned today

A large, empty rounded rectangle with a black border, intended for handwritten notes.

That is unclear

A large, empty rounded rectangle with a black border, intended for handwritten notes.

That felt
redundant

A large, empty rounded rectangle with a black border, intended for handwritten notes.

That will be
useful to you

+ Quick poll

Which 'method' do you think is most useful in your work?

1. Personal reflection journal
2. Monthly team meetings
3. Annual reflection meetings
4. Snapshot surveys
5. None of them
6. All of them

Evaluative Thinking in Action

You know evaluative thinking is happening when you hear things like:

Why are we assuming X?

How do we know X?

What evidence do we have for X?

What is the thinking behind the way we do X?

How do we do X better?

How does X connect to our intended outcomes?

+ Free-Range Evaluation...

...is evaluative thinking that lives unfettered in an organization.... It is made stronger by freely moving among people, programs, and special projects, taking sustenance from its natural surroundings. Its vulnerability is also a strength: If it survives the challenges it confronts, it becomes stronger.

King (2007). Developing evaluation capacity through process use. *New Directions for Evaluation*, 116, 45-69.
